"Since the early 20th century, we've been debating what's going on because the answer appears to be that rocks are brittle because they're undergoing these rapid reactions called deformation," says lead author Dr. Robert D. Brown, professor of earth sciences at Duke University. "This suggests that there are two kinds of shock and that one type of shock might be affecting rocks, and the second type can't damage them because the stresses are too low," he says.. 4 25 USA Big Fish New Line Cinema Home Entertainment Action & Adventure 3 46 1.42 \$4 "Rodeo" 1/9/2017 2017.. 11 32 USA The Hunger Games:
